

Felipe Gomes

AI Engineer · Frontend · Full-stack capable

felipedrg02@gmail.com · Rio de Janeiro · github.com/lipereis · linkedin.com/in/felipe-gomes-0220b7247

SUMMARY

I'm Felipe Gomes — a video editor turned product builder, now focused on AI engineering. I started in post-production, learned to ship with HTML, CSS, JavaScript, React, and Next.js, then built AI-assisted tools at the video × product intersection. Today I write frontend-strong, full-stack-capable code and aim for an AI engineering role where craft and shipping both matter.

EXPERIENCE ARC

Video Editing & Creative Craft — Foundation

Built a videomaker practice — pacing, storytelling, and finishing. That visual discipline still shapes how I design interfaces and ship product polish.

Learning Programming — Growth

Self-taught path from HTML/CSS/JavaScript into React and Next.js. Shipped personal sites and experiments while learning modern frontend fundamentals.

Product & AI Tools Transition — Current

Building tools at the video × AI intersection (scripting, jump cuts, tube/ops workflows). Moving from creative tooling into serious software engineering practices.

SELECTED PROJECTS

- **video-portfolio (JavaScript)**
Video editor / videomaker portfolio site.
- **ladobdacena (HTML, CSS, JavaScript)**
Articles on music, cinema, and fashion.
- **scriptmvp-ai (Python)**
AI tool for viral Reels / TikTok / Shorts scripts (prompt engineering portfolio).
- **Wealthchain (JavaScript)**
Crypto market UI powered by the CoinGecko API.
- **CineOps (JavaScript)**
Video / ops tooling experiment at the creative × product intersection.
- **tubepilot-ai (TypeScript)**
AI-assisted tube / content workflow tool (live on Vercel).

SKILLS

Frontend: React, Next.js, TypeScript, Tailwind CSS, HTML / CSS, Framer Motion

Backend: Node.js, REST APIs, Next.js Route Handlers

Languages: TypeScript, JavaScript, Python, SQL

Databases: PostgreSQL, SQLite

Tools: Git / GitHub, VS Code / Cursor, Vercel, AI tooling

Design: Figma, Video editing, UI craft

EDUCATION & LEARNING

Self-taught software path via structured online coursework (HTML, CSS, JavaScript, UI fundamentals) and public GitHub projects in React, Next.js, TypeScript, and AI tooling. Formal certificates and course titles to be added when finalized — no university degree listed.
